

Minimum Melting Time-Current Characteristic Curves

SM Refill Units - S&C Capacitor Speed

APPLICATION NOTE: These S&C Capacitor Speed refill units should be applied where the highest anticipated capacitor-bank current—including any increases above the nominal bank current caused by capacitor-unit manufacturing tolerances, harmonic currents, or system operating voltage levels higher than the nominal voltage rating of the capacitor bank—does not exceed 400 amperes.

REFILL UNITS AVAILABLE

Refill Unit	kV Nom. Ratings	Ampere Ratings
SM-5®	14.4	400

Supersedes Data Sheet 240-212 dated 8-5-85.
